

Technology Skill Development Lab Java

Assignment No.1

Student Name : Saurabh Ashok Wagh

Roll No. : 26

Division : A

Batch : A2

Class : SY

Branch : B-Tech AI & DS

Course Teacher Name : Prof. Vishakha Salunkhe

Problem Statement-

Installation of Java and Eclipse IDE

Steps:

Part 1: Download and Install Java (JDK)

1. Download the JDK: Visit the Oracle Java Downloads Page. Select Windows and download the x64 Installer
2. Run the Installer: Double-click the downloaded `.exe` file. Follow the prompts by clicking Next until the installation completes.
3. Copy the Installation Path: Open your file explorer and navigate to where Java was installed (usually `C:\Program Files\Java\jdk-[version]`). Copy this folder path.

Part 2: Set the Java Environment Variable

1. Open Environment Variables: Search for "Environment Variables" in your Windows search bar and click Edit the system environment variables.
2. Add JAVA_HOME: Click the Environment Variables button at the bottom. Under *System Variables*, click New. Set the Variable name as `JAVA_HOME` and paste your copied JDK path into the Variable value. Click OK.
3. Verify the Installation: Open your Command Prompt, type `java -version`, and press Enter. If installed correctly, it will display your current Java version.

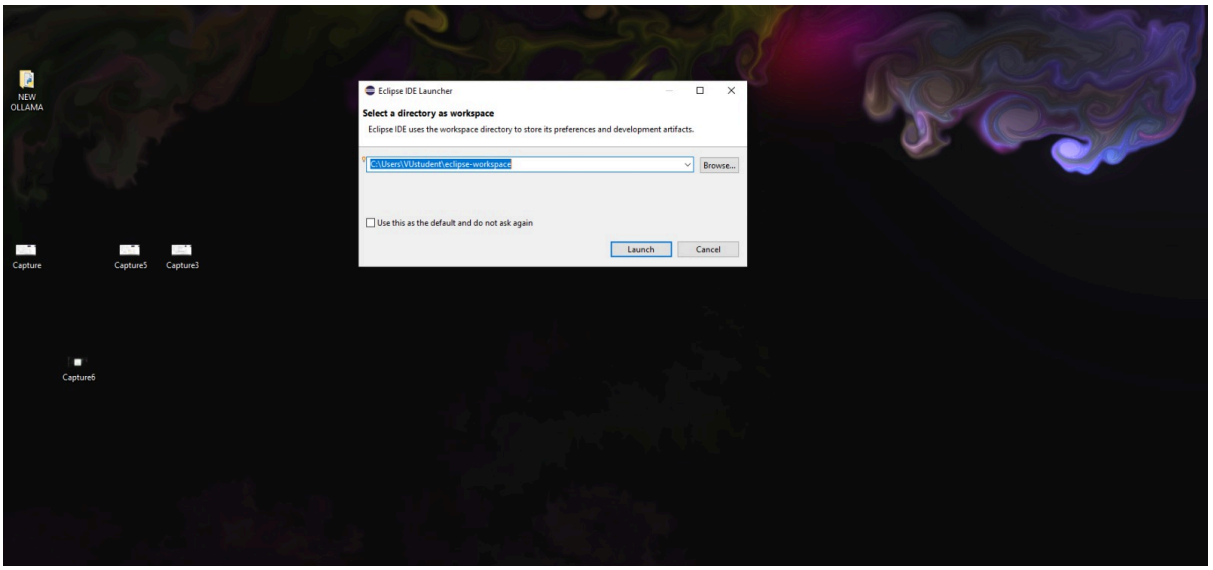

Part 3: Download and Install Eclipse IDE

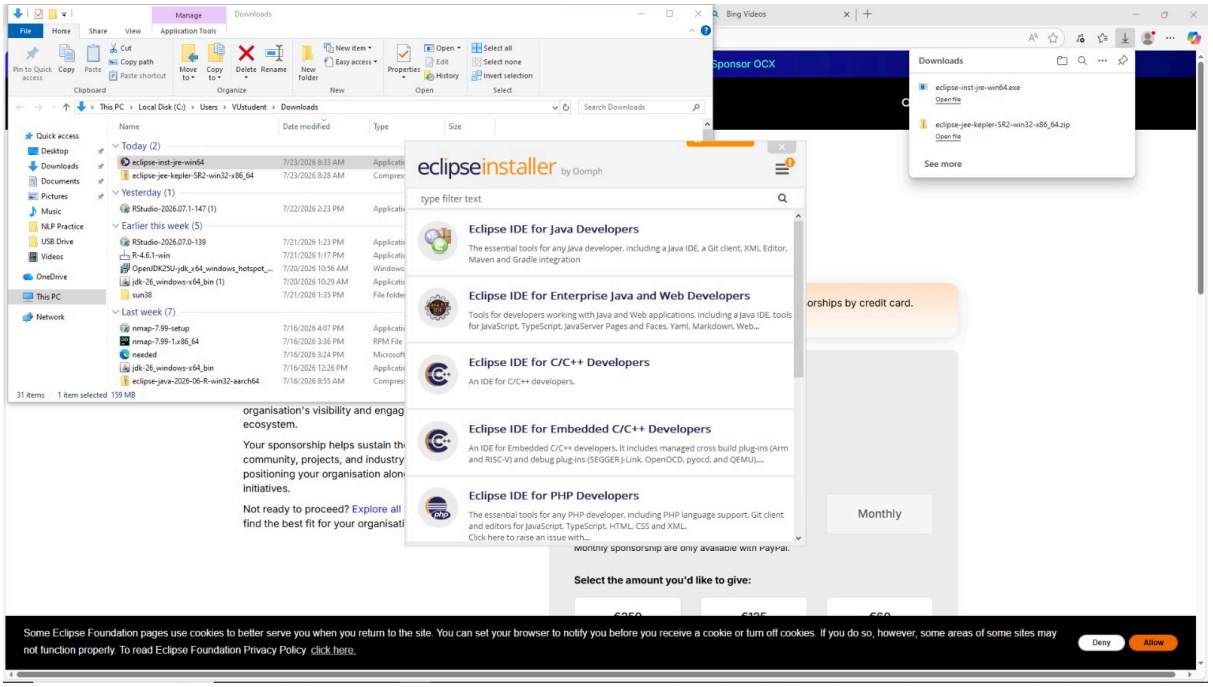

1. Download Eclipse: Go to the Eclipse Downloads Page. Click the Download x86_64 button to get the installer executable.
2. Run the Installer: Launch the downloaded `eclipse-inst-win64.exe` file.
3. Select the Package: From the menu options, select Eclipse IDE for Java Developers.
4. Choose Java VM: The installer will automatically detect your installed JDK path. Verify the folder path and click Install. Accept the user agreement if prompted.
5. Launch: Once complete, click the green Launch button.

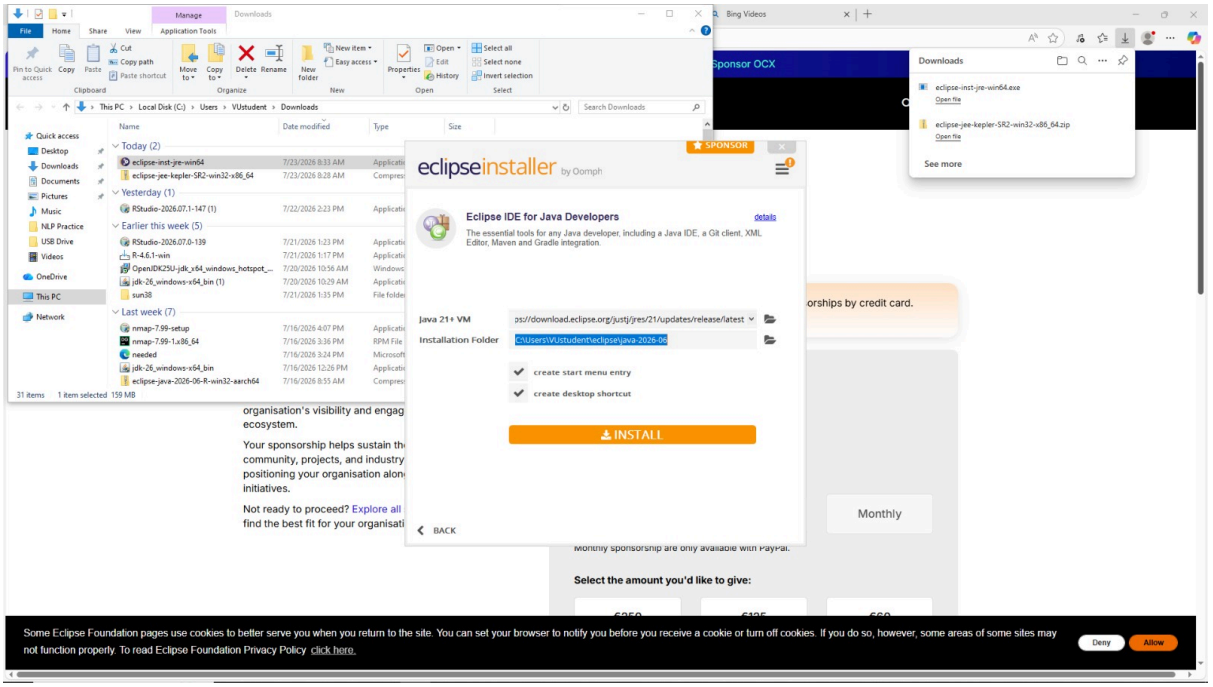

Part 4: Setup Workspace and Run Your First Program

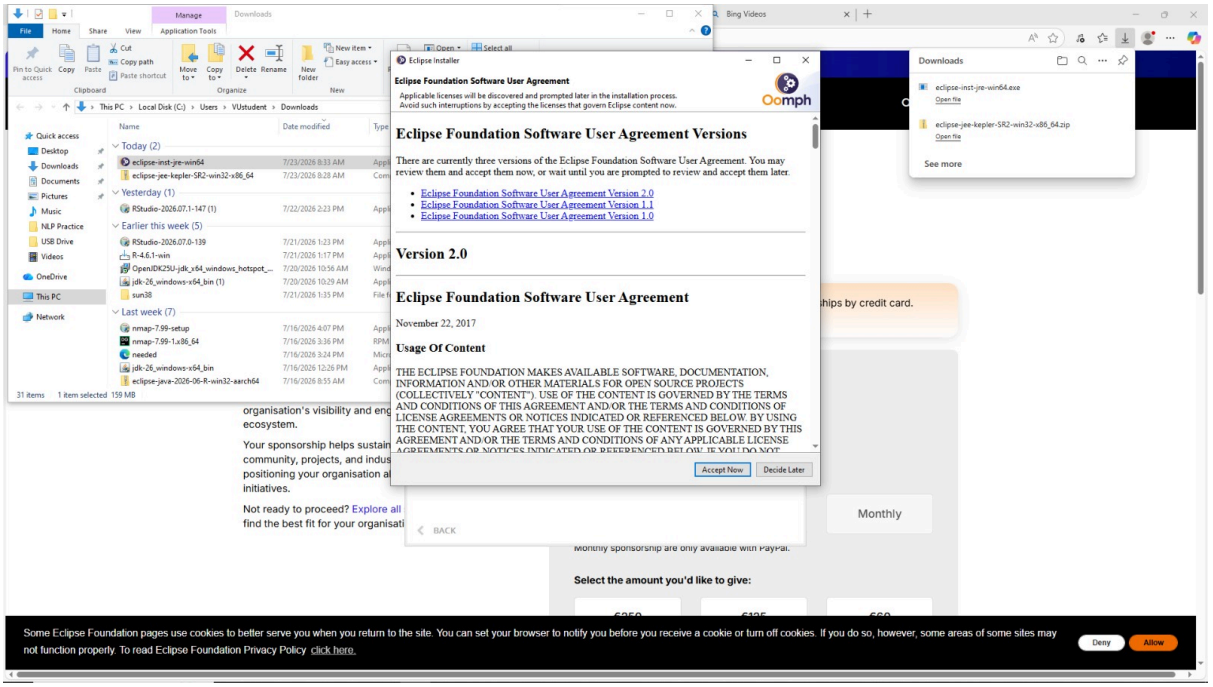

1. Set Workspace: Choose or leave the default folder directory where Eclipse will store your projects. Click Launch.
2. Create Project: Click File > New > Java Project. Name your project and click Finish.
3. Create Class: Right-click the `src` folder, select New > Class. Name it `Main`, check the box for `public static void main(String[] args)`, and click Finish.
4. Run Code: Add `System.out.println("Hello World");` inside the main method. Click the green Run (Play) button in the top toolbar to see your output in the console below.

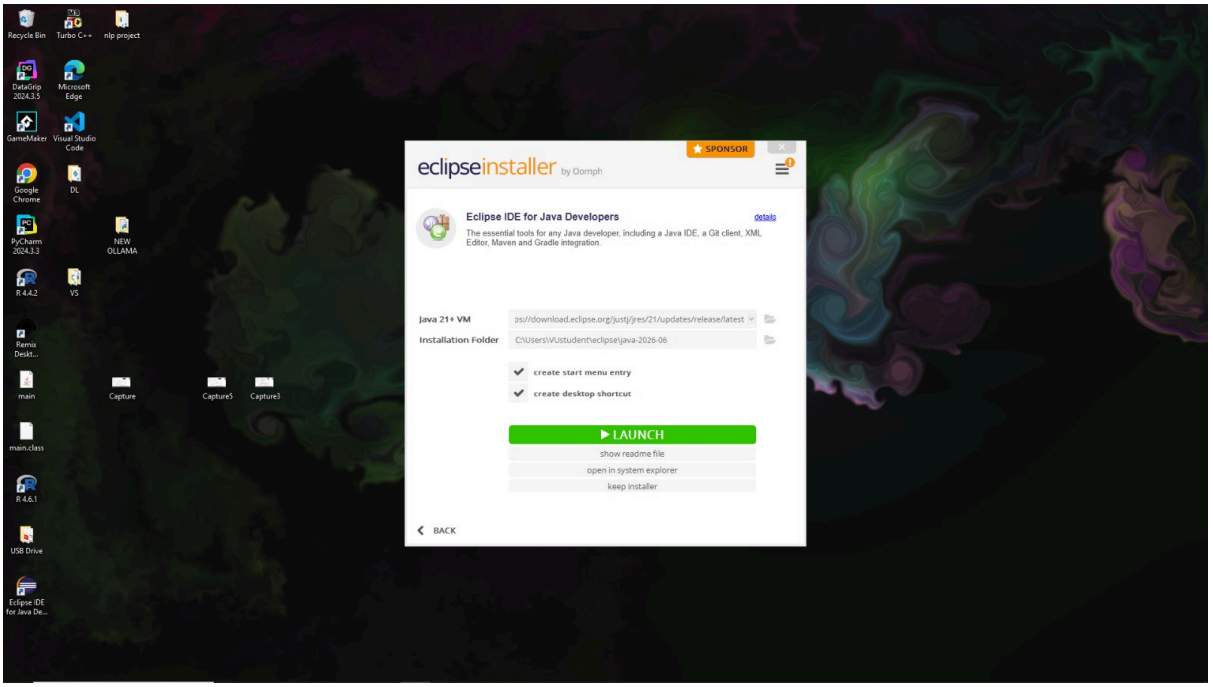

Output-

NEW OLLAMA
Eclipse IDE Launcher
Select a directory as workspace
Eclipse IDE uses the workspace directory to store its preferences and development artifacts.
C:\Users\VUstudent\eclipse-workspace
Browse...
Use this as the default and do not ask again
Launch
Cancel
